

## Analyse Blackboard Quiz Results

Blackboard Quick Guide

These instructions relate to a simple Quiz scenario, where each student has the same set of questions rather than an individualised quiz using a variety of questions from a question pool (such as question sets and random blocks).

Both the order of multiple choice answers for each question and the order of the Quiz questions may be **randomised**, it will not affect the analysis.

Go to the Grade Centre and hover your cursor over the drop-down arrow to the right of the column's title ("Click for more options" text will appear) :

SAMPLE BLACKBOARD QUIZ	WEIGHTED TOTAL
72.00	..
67.00	..
51.00	..
25.00	..

Select **Attempts Statistics** from the drop-down menu.

In the example on the right, the quiz contains 8 questions, each worth 10 points. You can see the average score for the whole quiz on top, in this case 53.75 points (**Attempt Score**) out of possible 80 for the 4 students that took the quiz (**Marked Attempts**).

Attempts Statistics is not available for question sets or random blocks.

**Question 1: True / False** Average Score 7.5 points

**True/False Question:**  
 Auckland is the capital of New Zealand.

**Comment:**  
 True/False questions allow students to choose either true or false in response to a statement question. True and false answer options are limited to the words **True and False**.

Correct Answers	Per cent Answered
True	25.00%
<input checked="" type="checkbox"/> False	75.00%
Unanswered	0.00%

**Question 2: Multiple Choice** Average Score 10 points

**Multiple-Choice Question:**  
 What is the capital of China?

The average score for each of the questions is displayed to the right, in line with each question type. Attempts Statistics allows instructors to view how students responded to each question and determine whether there is a need to revisit certain topics in class should the test demonstrate a lack of understanding in the area.
